SUMMARY 25+ years of coding experience, 10+ years of industry experience, and 6+ years of management experience. Technical expertise in distributed systems and user-facing products, strategic vision, and can-do attitude. I drive fast, impactful solutions, tackling complex problems with wide consensus and innovation.

SKILLS Languages: Spanish (Native), English (C2), German (B2), Swiss German (B1), and Esperanto (B1)
Systems: Architecture, performance, automation, monitoring, load balancing, capacity, and data integrity
Computer Languages: Go, Java, Python, TypeScript, PHP, shell script, and SQL
People: Organization design, career development, team health, coaching, presentation, and negotiation

EXPERIENCE

Google — YouTube Infrastructure, Software Engineering | 2022– now
Senior Engineering Manager (L7)

- Improved the performance of high-throughput internal pipelines with hundreds of dependencies by 100x and the overall user-facing latency by 30x
- Extended the power of expression of an internal system with generic solutions that cover new critical user journeys with zero additional engineering investment

Google — Cloud Artificial Intelligence, Site Reliability Engineering | 2018–2022
Engineering Manager (L5) → Engineering Manager II (L6) → Senior Engineering Manager (L7)

- Redefined five production areas across >1k engineers: capacity management, monitoring, rollouts, data integrity, and frameworks
  Awards: 2x Tech Debt Buster, Perfy, Cloud Tech Impact, Core Tech Impact, and Google Tech Impact
- Productionized three large Cloud Artificial Intelligence products, enabled the safe onboarding of preview customers and the general availability launch

Google — Datacenter Software, Site Reliability Engineering | 2017–2018
Technical Leader/Engineering Manager (L5)

- Sped up efforts to revamp critical datacenter systems and landed them one year ahead of time

Google — Apps Storage, Site Reliability Engineering | 2014–2017
Intern → Software Engineer (L4) → Senior Software Engineer (L5) → Technical Leader (L5)

- Developed capacity management models for products with >1B users and saved significant resources
- Planned and executed time-critical deeply technical and risky operations with zero downtime
  Awards: Feats of Engineering

Universidad de Granada, Spain — Computer Science and Artificial Intelligence | 2010–2014
Fellow on University Teaching Training

- Researched on model-based parsers and 3D motion tracking
- Directed a Master Thesis on music-prototyping languages and obtained a Best Thesis award

STUDIES

Master in Research, Soft Computing and Intelligent Systems — University of Granada | 2009–2010

- Finished thesis on lexical analyzers and parsers with ambiguity support
- Average grade 9.3 out of 10

Bachelor of Science, Information Systems Engineering — University of Granada | 2009–2010

- Average grade 8.7 out of 10
- First of class award

Master of Science, Computer Science — University of Granada | 2007–2009

- Finished thesis on Java bytecode-level similarity detection and obtained a Best Thesis Award
- Average grade 9.2 out of 10
- First of class award
- National award to the academic excellence
- Honorary diploma of the Technical School of Computer Engineering and Telecommunications

Bachelor of Science, Computer Systems Engineering — University of Granada | 2004–2007

- Average grade 8.7 out of 10
- First of class award

PUBLICATIONS

Team Management

- Published a book chapter on managing team overload

Distributed Systems

- Published a tech talk and an article on capacity management
- Published a tech talk on Google's production environment
- Published a tech talk on the Paxos algorithm

Generative Artificial Intelligence

- Developed nodes and workflows for Stable Diffusion ComfyUI tool

Videogame Development

- Developed a rogue-like videogame in JavaScript with no frameworks
- Developed a web-based multiplayer videogame in PHP+MySQL, with 10K+ players in the '00s
- Developed a shooter videogame in C for the Game Boy Advance console
- Developed a dungeon videogame prototype in Java with custom physics and graphic engines
- Developed a physics engine and basic taxonomy in GameMaker
- Developed a dungeon videogame prototype in Go with custom physics and inventory engines

Language Learning

- Published three Spanish short story books for children
- Published a dictionary across 5 languages

Music Production

- Published an indie alt-rock album, one and two synth albums, and one and two piano albums
