SUMMARY 26+ years coding, 21+ years managing systems, 11+ years in industry, and 7+ years managing people. Technical expertise in distributed systems and user-facing products, strategic vision, and can-do attitude. I drive fast, impactful solutions, tackling complex problems with wide consensus and innovation.

SKILLS Systems: Architecture, performance, automation, monitoring, load balancing, capacity, and data integrity
Artificial Intelligence: Infrastructure and solutions using Generative Multi-modal Models
Computer Languages: Go, Java, Python, JavaScript, TypeScript, PHP, Bash shell script, and SQL
People: Organization design, career development, team health, coaching, presentation, and negotiation
Languages: Spanish (Native), English (C2), German (B2), Swiss German (B1), and Esperanto (B1)

EXPERIENCE **Google**, 2014 – currently

YouTube Infrastructure, Software Engineering — Engineering Manager (L7)

- Improved the performance of high-throughput pipelines by 1000x. **Award**: Performance Excellence
- Productionized and applied Large Language Models to increase expresiveness of user-facing products

Cloud Artificial Intelligence, Site Reliability Engineering — Engineering Manager (L5 → L6 → L7)

- Revamped capacity, monitoring, rollouts, data integrity, and frameworks across >1k engineers. **Awards**: Cloud + Core + Google Tech Impact, Perfy, and 2x Tech Debt Buster
- Productionized three large Cloud Artificial Intelligence products and enabled their launch

Datacenter Software, Site Reliability Engineering — Technical Leader/Engineering Manager (L5)

- Sped up efforts to revamp critical datacenter systems and landed them one year ahead of time

Apps Storage, Site Reliability Engineering — Technical Leader (L4 → L5)

- Developed capacity management models for products with >1B users. **Award**: Feats of Engineering

University of Granada, 2010 – 2014

Department of Computer Science and Artificial Intelligence — Fellow, University Lecturer in Training

- Researched on model-based parsers and 3D motion tracking
- Directed a Master Thesis on music-prototyping languages. **Award**: Best Thesis

STUDIES **University of Granada**, 2004 – 2010

Master in Research, Soft Computing and Intelligent Systems. GPA 9.3/10

Bachelor of Science, Information Systems Engineering. GPA 8.7/10. **Award**: First of Class

Master of Science, Computer Science. GPA 9.2/10. **Awards**: First of Class, National Award, Best Thesis

Bachelor of Science, Computer Systems Engineering. GPA 8.7/10. **Award**: First of Class

PUBLICATIONS

Team Management

- Published a book chapter on managing team overload

Distributed Systems

- Published a tech talk and an article on capacity management
- Published a tech talk on Google's production environment
- Published a tech talk on the Paxos algorithm

Generative Artificial Intelligence

- Developed ComfyUI nodes for Generative Artificial Intelligence prompt combination and inpainting

Computer Vision

- Developed a 3D motion tracking solution that works on a single camera

Language Processors

- Developed lexical analyzers, parsers, and a model specification library with ambiguity support
- Designed a domain-specific language for music prototyping
- Developed a Java bytecode similarity detector

Videogames

- Developed a rogue-like videogame in JavaScript with no frameworks
- Developed a web-based multiplayer videogame in PHP+MySQL, with 10K+ players in the '00s
- Developed a shooter videogame in C for the Game Boy Advance console
- Developed a dungeon videogame prototype in Java with custom physics and graphic engines
- Developed a physics engine and basic taxonomy in GameMaker
- Developed a dungeon videogame prototype in Go with custom physics and inventory engines

Language Learning Resources

- Published three Spanish short story books for children
- Published a dictionary across five languages

Music

- Published one and two indie rock albums, one and two synth albums, and one and two piano albums
